PVC HANGARS
АНГАРЫ ИЗ ПВХ

Designing, production, sales and installation of PVC hangars

PVC hangars are an ideal solution when you need a large weatherproof indoor area; hangars can also be thermally insulated. Their area of application is very versatile and depends on the actual needs of the customer. Hangars make splendid production and storage spaces.

The advantages of hangars over permanent structures are short construction and installation time and ease of relocating. Medium-sized hangars have no need for a foundation. Easy to install on any ground. Assembly of the supporting structure and covers on site is very easy and does not take too much time. Hangars can also be extended later.

We offer full solution to our customers including:

- Consultation;
- Price offer;
- Designing;
- PVC hangar production;
- PVC hanger installation;
- Additional works (electrical installations, etc.)

Production of each PVC hangar is project-based and depends on the needs, requirements or possibilities of the customer.

Additionally to PVC hangars, we also offer full solutions for regular (sandwich) hangars

1 Production companies

Production companies who need space for storing raw materials or end-products

WHangar
